

National Soil Survey Center Activities

Robert J. Ahrens¹

¹ National Soil Survey Center, NRCS, Lincoln, NE

ABSTRACT

The National Soil Survey Center is the technical arm of the soil survey program and in that capacity is involved in a host of endeavors to support the soil survey program soil and disseminate soil survey information. The presentation will focus on many of the activities at the Center, including personnel changes, realignment of duties, potential opportunities, marketing strategy, the Soil Geomorphic Institute and other training, cooperator characterization data, the geophysical network, and the gypsum project.

As we transition to the "New Soil Survey," the Center will need to put more resources into identifying data gaps and working with the MLRA Soil Survey Offices to develop project plans.
